It began as a product that revolutionized the way CAD was used and how it was developed. First created in 1982, it was the first commercially available CAD product running on an internal graphics controller and provided object-oriented programming. Its transition from being a desktop app to a browser-based mobile app, continued in 2014, when it became the first CAD application to be offered as both desktop and mobile apps, as part of Autodesk's transition from having a separate web browser product to a single web browser. AutoCAD: 2018 Edition In November 2017, Autodesk introduced AutoCAD 2018. Users can access it on mobile devices and the desktop, and it supports 3D. "[W]e're not stopping there," according to the company. "You'll be hearing more about AutoCAD 2018 in the months ahead." The new AutoCAD 2018 edition is expected to offer the following new features: Raster, vector and 2D PDF support for Drafting-Specific Output AutoLISP and Object Linking and Embedding (OLE) import support Time-based drawing features 3D Modeling tools Some of the new features that are expected to be added to AutoCAD 2018 include: Designer panels Viewport shading tools Staggered view options Change surface order Time-based view of drawing status Lag compensation The new AutoCAD 2018 is expected to be released

Make sure that your operating system is 32-bit or 64-bit and you are logged in as administrator. If it is 64-bit and you are logged in as normal user, you will get the error "Out Of Range" when you open the file "Setup.exe". If you click on Continue button, your system will hang. You have to install Autocad as administrator. Close Autocad. Open the Autocad.exe. Open the menu bar and click on "File" and "Exit". Enter key code and your activation will be installed. Source A: You can also download Autocad from here and use the activation. Q: Adding a python library to eclipse by PYDEclipse I just installed the pydev plugin for eclipse. I am new to eclipse and python so I dont know how to add new libraries to the python. I installed a python library and it works in the command line, but how do I add this to my eclipse project? Do I add it manually? or is there a way to create an installation.egg? A: The instructions on the pydev site show how to do this: To add a new library to Eclipse: Open Eclipse's "Windows" menu and select "Preferences". In the "Preferences" window, click on the "PyDev" tab. Click on the "Add..." button. Enter the name of the library, i.e.: "pygobject" and click on the "Add Library..." button. If you have a package like PyGObject 2.30.3, you can click on the "Browse..." button, choose the folder where you have your library and a new window will open, where you can select which files to add. To use that library, go to "PyDev" -> "Code Assist" and select the "Use library" option. Q: Intuition for how 'this' works I have been trying to understand the intuition behind how the "this" keyword works, but have not found a satisfying answer so far. I think I am on the right track, but my understanding is still too fuzzy. Let's consider an example.

What's New In?

The Import and Markup Assist tools, which allow you to import comments, notes and markups from other file formats directly into the current drawing, are now fully supported. Note: The Layers panel is no longer hidden during imported markups. Layer Variation: Automatically identify parts that are to be replaced and add a 'Replace' command to the command bar. (video: 1:45 min.) Automatic creation of contextual Layers via the 'Variations' command. Variations can be created in AutoCAD as custom Layer Variations or as a sub-layer group. Layer Variations can be combined with Variation Sets to achieve more complex design scenarios. 'Variations' can be created, edited and deleted as Layer Variations, but are also preserved as Layer Variation Sets for future use. Note: the graphical user interface (GUI) command for Layer Variation will be released with AutoCAD 2023. Architectural Repetitions: Maintain the same building height and width as existing drawings for the same building, whether it be an existing drawing or a user-drawn drawing. (video: 2:10 min.) Introducing architectural repetitions which can be used to maintain the same building height and width as an existing drawing. Technical Repetitions allow you to maintain the same values for a building's base area, span and elevation to achieve a consistent massing. Automatic creation of new Architectural Repetitions when you load a new CAD file. CAD data files can be automatically saved as Architectural Repetitions. Note: Repetitions are only supported with 'new' construction drawings. For details, see the AutoCAD Technical Repetitions documentation. Enhanced Floodplain Calculation: Simplify complex flooding situations and get fast, accurate results. The enhanced floodplain calculator features a simplified calculation procedure, more accurate calculations, and built-in error checking to help you obtain consistent results. (video: 1:36 min.) See the new Explain and Explain with Image window buttons and two new wizard buttons. The new Show Info menu item is also available when the Explain window is displayed.
