Internet Explorer Security Pro is a lightweight Windows application whose purpose is to help you customize different features of Internet Explorer, such as disable individual menu items and tabs from the Internet Options dialog, and prevent others from editing your Favorites. User interface: The tool reveals a tree-like display where you can access all of the available IE settings and options. They are grouped into three main categories, namely Internet Explorer settings, User settings, and Tools. What's more, you are allowed to save the configuration data to your computer so you can easily import it in your future projects. Changing the looks of the GUI can be done with the aid of different skins. You may set up a master password for making sure other users cannot access and modify your setup parameters. IE options: Internet Explorer Security Pro gives you the possibility to disable the Favorites dialog, menu items (e.g. File, Open, New, Save As, Close, View Source, Internet Options), and toolbar functions (e.g. Toolbar, Address Bar, Links Bar, toolbar customization, Back, Forward, Stop, Refresh, History). What's more, you can change the title caption, toolbar background and animated icon, modify the default folders (e.g. cache, history and cookies directory), replace standard error information pages (e.g. start page, offline information), as well as restrict some of IE's browser functions, namely file downloading, context menu actions, form and password auto-completion. The tool lets you disable features from General, Security, Privacy, Content, Connections, Programs, and Advanced tabs, and add or remove websites from security zones. You can also create lists with websites and allow or block access to them, set a password, as well as specify the time interval when the settings are available. User settings and extra tools: Internet Explorer Security Pro helps you enable the logging of a user activity to a file and automatically go to the default page or close the web browser after a certain amount of time of inactivity. Extra utilities allow you to delete cookies, clear the entire browsing history, as well as erase the typed address history.
