Keymacro is a program that simplifies the password entry process and makes it easier to save them. Keymacro has two main functions:

- Copy entire lines to Clipboard: You can easily copy the contents of a specified file or a text area using a hotkey.
- Keyboard macro recording: This software enables you to create your own shortcuts by recording a series of actions using the keyboard. Keymacro also includes many useful features that make it worth the price:

- Automatic file and directory backup: If you are careless about your documents and folders, the program will run in the background and automatically backup them at regular intervals.
- Intelligent reminder: If you need to take an action on a certain day, the program can notify you when you are close to the deadline.
- Recursive search: Keymacro enables you to run a search on several folders at a time. It automatically filters the results, so you can sort them.
- Single-copy paste: You can paste the selected text multiple times by pressing the “Copy” key.
- Auto-detect text and dates: When you open a file, the software will automatically detect the text and dates present in the file and makes them ready to use.
- Window preview: If you want to quickly find out the contents of a specified window, you can simply drag the window to the left side of the screen and click on the “Preview” button.
- Show hidden files: When you launch the search function, hidden files are automatically shown.

Keymacro can be used to back up files, folders, as well as any documents. However, before doing so, be sure to install it first, as this program might not work if you are running an unsupported operating system. Keymacro is not free, but it comes at a reasonable price. Release date: 30.04.2011 Platforms: Win32 Price: Free Exe file size: 275 Kb Advanced Custom Fields (ACF) is a WordPress plugin to allow users to easily add custom fields to WordPress posts. This feature is very useful for building forms and polls, and a great help when adding features to your website. In this tutorial, we will guide you step by step through the installation of ACF in WordPress. Once installed, you can create unlimited custom fields and specify their settings in the admin panel. Before you begin Make sure that you have the latest WordPress version installed on your website. You can download WordPress from here. You must also have the latest version of the ACF plugin installed in order to install the Custom Fields plugin. To check your current version, go to Tools > Plugins. Installation Log in to your WordPress Dashboard and head to Plugins. Click Add New to create a new install. Give the new plugin a suitable title such as "Custom Fields" or something else that makes sense to you. Now click on Install Now at the top of the Plugins page. Once the installation process is complete, click Activate. Set up your custom fields After activating the plugin, you can see the newly added Custom Fields button on the screen. To add a new field, click on the button to open the ACF Options page. The Custom Fields page is where you can add a new custom field to any post or page. All you need to do is to follow the below steps to set up a custom field: At the bottom of the screen, you can see a number of custom fields to choose from. Once you find the field that best matches your requirement, click on the 'Add Custom Field' button. Specify the name of the field. In our case, we will give the field name as "Age" and you should also enter a name for the field. It is recommended to use an appropriate name for each field. You can now specify the settings of the field. You can use these settings to specify the number of characters, the width of the field and the access permissions for the field. In our case, we want the field to be a numerical field. Therefore, just type in 1 and then click Save. You can
