777 worldlinerÂ .Evidence of association between the codon 44
locus of the insulin receptor substrate 1 gene and type 2 diabetes
in Chinese population. We examined potential associations
between four tagging single nucleotide polymorphisms (SNPs) in
the insulin receptor substrate 1 gene (IRS1) with type 2 diabetes in
a Chinese population. We studied 453 unrelated Han Chinese
patients with type 2 diabetes and 526 matched controls, and found
that the SNPs at positions -45 and -24 from the transcription start
site in exon 1, and at position -75 from the transcription start site
in exon 1 of IRS1 are significantly associated with type 2 diabetes
in Han Chinese population. These three SNPs genotypes (TT, TC,
and CC), relative to the wild-type genotype (AA), were statistically
associated with type 2 diabetes. были инструкционированы
правительством под подписью мэрии и адвокатов, которые в
принципе не были прозрачными, и которые помещали идеи в
виде законопроектов, сфальсифицированные. Поздравляем
Романа Титова и Максима Шабойленко, которые получили
сертификат на вопросы по правилам и стоимос
